Ok, I think this is it:

Take 20 sheep from pen 4 and take to cone. Handler/dog go to another post and send to gather(1) (started, Int, Adv all difference distances) (2)Drive/fetch to pylon on road. Go over bridge and take sheep on road up around hill; at cross street, stop and look for traffic. Dog must hold sheep still while handler does this. Return back to main field and work the (3)graze. After 5 minutes on graze, take sheep to arena gate and (4) sort Take remainder sheep to trailer and load

1. Advanced gather 100 yards; Intermediate handler can walk halfway; Started handler can to within 30 feet of sheep
2. Advanced drive 50 yds to pylon; Int handler can walk halfway; started fetch
3. Advanced graze handler must stand 150 feet from graze while dog works it; Int handler assumes one spot and stays; St can walk anywhere
4. Advance sort 5 marked sheep; Int 3 of five are marked; St any five
